

EGGINOX

EGGINOX: Stainless Steel Eggs

1500L Egginox at Movia in Slovenia.

Egginox was founded by three professionals in the wine and inox industries and the company **specializes in the production of premium inox egg-shaped** fermentation and aging vessels for winemaking and beverage alcohol production. The production site is located in **Nova Gorica Slovenia** which is right on the frontier with the **Friuli region** of Italy, one of the **aromatic white wine capitals of the world**.

MATERIAL

The grade of inox used in the production of the Egginox eggs is **AISI 304 stainless steel** and the inner surface is **polished BA (Bright Annealed)** that has minimum roughness to facilitate tartrate removal.

HISTORY

The **Collio section of Italy's Friuli region** has a rich history in growing aromatic white varieties that are made in a **combination of oxidative and reductive styles**. Nova Gorica in Slovenia is right on the border with this famous Italian winemaking region but it also has a famous and well respected winemaking region of its own. Slovenia as a country supplies Europe and other International markets with many **Inox manufactured products** and is considered a **specialist and industry leader for this material**.

PRODUCTION

What makes the Egginox product unique in the industry is the **high grade premium inox** used and the **specialized welding** that is carried out meticulously by professionals who are absolute experts at their craft. The egg shape of the vessel and the material which it is made from makes **cleaning the tanks extremely practical and hygienic** since steam can also be applied.

Egginox customer plaque that comes with tank.

POROSITY

The **porosity of inox is 0%**. This means that the "angel's share" on the tank is next to nothing and the wines inside of the tank **do not see the oxygen exchange experienced** with barrels, amphora or concrete tanks.

WINEMAKING & STYLES OF WINE

The Egginox tanks maintain the **natural suspension of the lees and preserve the juice's fruit quality during fermentation, the PH of the wine is not impacted and there is no variability between tanks**. The light weight of the tanks make them extremely easy to handle and clean hygienically. The shape and engineering of each Egginox tank follows the golden ratio found in natural eggs.

By keeping the wine in constant motion and the lees in constant suspension, the Egginox will **add a textural component to your wine** and because of the material's inertness and lack of porosity, it will **amplify the taste of fruit and respect the identity of your vineyard site**.

With references spanning from the Friuli in Italy, Brda in Slovenia, Alsace, Burgundy and Champagne in France and the Vinho Verde region of Portugal, the **Egginox tanks are gaining a following** with aromatic whites, sparkling wines and light skinned red producers where very **minimum oxygen exchange is needed to keep the wine in a bright, energetic and tense state**.
